TIMBER MAX TG ULTRA

Timbermax TG Ultra

Take our most popular and proven engineered timber construction, and combine it with one of the hardest timbers in the world, and you have Timbermax Ultra.

Timbermax Ultra has a 2mm surface layer of Hickory, renowned for its density and stability. In fact, when compared with Oak on the traditional timber hardness scale, referred to as the Janka scale, Hickory has a rating of 1820 verses Oaks 1360 - a significant difference in hardness. This makes hickory the ideal choice for those high traffic areas in your home.

Aesthetically, Hickory has natural grain similar to oak, and combined with the 4 on trend stains available in Timbermax Ultra, there is sure to be a look to match the aspirational renovator or new home builder alike.

For further protection, the hickory surface is finished with a low sheen UV cured Duracoat. This not only enhances the finish but provides stain protection and minimises surface scratches. Timbermax Ultra in Hickory is a great choice for those wanting a tough real timber flooring option in todays most popular colours.
